PROFESSIONAL SUMMARY

Computer Science graduate and Infosys System Engineer transitioning into Data Analytics. Completed structured technology training at Infosys covering SQL, Python, and software engineering fundamentals, followed by independent upskilling in Power BI and Excel. Built two end-to-end analytics projects covering large-scale data cleaning, cohort retention, RFM segmentation, and business-focused dashboard storytelling across e-commerce and retail domains.

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy), SQL(PostgreSQL)
Tools & Visualization: Power BI (DAX, Power Query), Microsoft Excel
Database & Environment: MySQL, SQLite, Jupyter Notebook, DB Browser for SQLite
Analytics Concepts: Cohort Analysis, RFM Segmentation, EDA, Data Cleaning, KPI Analysis, MIS Reporting
Additional Skills: Git & GitHub, Generative AI fundamentals

PROJECTS

E-Commerce Customer Analytics | Python, SQL, Power BI |

- Cleaned 1M+ raw records to 779K through systematic removal of nulls, cancellations, negative quantities, and duplicates, ensuring analytical integrity before modelling.
- Built cohort retention heatmap tracking 25 monthly cohorts over 2 years; identified high first-month customer drop-off as the primary retention lever across all cohorts.
- Scored 5,878 customers on RFM using quantile-based scoring and segmented into 7 behavioural groups, enabling targeted retention and re-engagement strategies.
- Constructed SQL analytical layer with 5 queries covering JOINS, CTEs, RANK() and LAG() window functions for customer ranking, segment revenue analysis, and month-over-month revenue trend comparison.
- Designed 3-page interactive Power BI dashboard; identified 1,551 at-risk customers with average monetary value of 6,271 and geographic revenue concentration risk as key business findings.

Retail & Superstore Sales Profitability Analysis | Python, Power BI |

- Conducted structured KPI analysis across revenue, profit margin, and order volume, moving beyond descriptive reporting to root-cause investigation of business performance gaps.
- Identified discount-loss relationship: high discount rates in specific sub-categories directly eroded profitability despite driving order volume, quantified impact across product categories.
- Performed regional and customer segment analysis to surface performance disparities; structured findings as business recommendations rather than raw observations.
- Developed Power BI dashboard focused on business storytelling, each visual tied to a specific analytical question rather than decorative reporting.

EXPERIENCE

Infosys Ltd.

System Engineer

Oct 2025 – Present

Bengaluru, Karnataka

- Completed 6-month structured technology training programme covering Python, SQL, DSA, DBMS, Cloud fundamentals, Agile methodologies, and Generative AI concepts.
- Independently pursued Data Analytics upskilling alongside training and completed two end-to-end projects in Python (Pandas), SQL, and Power BI focused on business insight generation.
- Gained exposure to enterprise software development lifecycle, ITIL framework, and professional delivery standards.

EDUCATION

Vellore Institute of Technology, Bhopal, MP

Bachelor of Technology in Computer Science and Engineering

Sept 2021 – Jul 2025

CGPA: 8.70

CERTIFICATIONS

- Infosys Certified Python Programmer — Infosys Lex (Apr 5, 2026) | 
- Infosys Certified Microsoft Power BI Developer — Infosys Lex (Jun 1, 2026) |
